How AI Can Predict Mumbai Rent :

- Regression models - "Used to estimate rents values based on historical data and features like zone, property type, and living costs."
- Recommendation systems - "Helps users identify affordable areas by matching preferences with cost data."
- Clustering premium zones - "Groups high-rent neighbourhoods together to highlight luxury clusters."
- Affordability prediction - "Combines rent-to-lifestyle ratios to show which areas are financially sustainable."

FoodRatio by Zone

This dashboard provides a clear overview of *Mumbai's cost of living*.

PAGE 1 highlights rent variations and zone distribution.

PAGE 2 breaks down food, grocery, and transport costs across neighbourhoods.

PAGE 3 presents comparative trends and lifestyle cost insights.

PAGE 4 introduces AI-driven approaches such as regression, recommendations, clustering, and affordability analysis to enhance rental understanding
